# SUPRAREX HDX

OVERVIEW ORDERING INFORMATION ALL PLASMA CUTTING MACHINES

The SUPRAREX™ HDX is a powerful and extremely durable gantry cutting machine with impressive positioning speed. Its innovative modular system handles a variety of cutting and marking tasks to meet individual application requirements. It can be equipped with tools for cutting, weld edge preparation and marking, and works with plasma, oxy-fuel or both processes in combination.

Featuring ESAB's Vision® control and Columbus® software as standard, the SUPRAREX HDX is ideally equipped for automated production processes. From the cutting table and the power supply to the peripheral environmental technology, all components are perfectly integrated and work together optimally, ensuring low maintenance requirements and a long service life.

Impressive acceleration and deceleration values help achieve high productivity and precision. As a high-performance, heavy-duty machine, the SUPRAREX HDX thus forms the solid foundation for economical cutting and marking with plasma and oxy-fuel.

The SUPRAREX HDX is ready to receive a multitude of different tools for cutting, weld seam preparation and marking with advanced plasma or oxy-fuel cutting technology. Even combinations of these processes or plasma cutting and marking without changing tools are no problem for the SUPRAREX HDX. The options for combining the diverse range of system modules are almost limitless.
